

# PMB AND RECYCLING

## EXPERIENCES FROM GERMANY

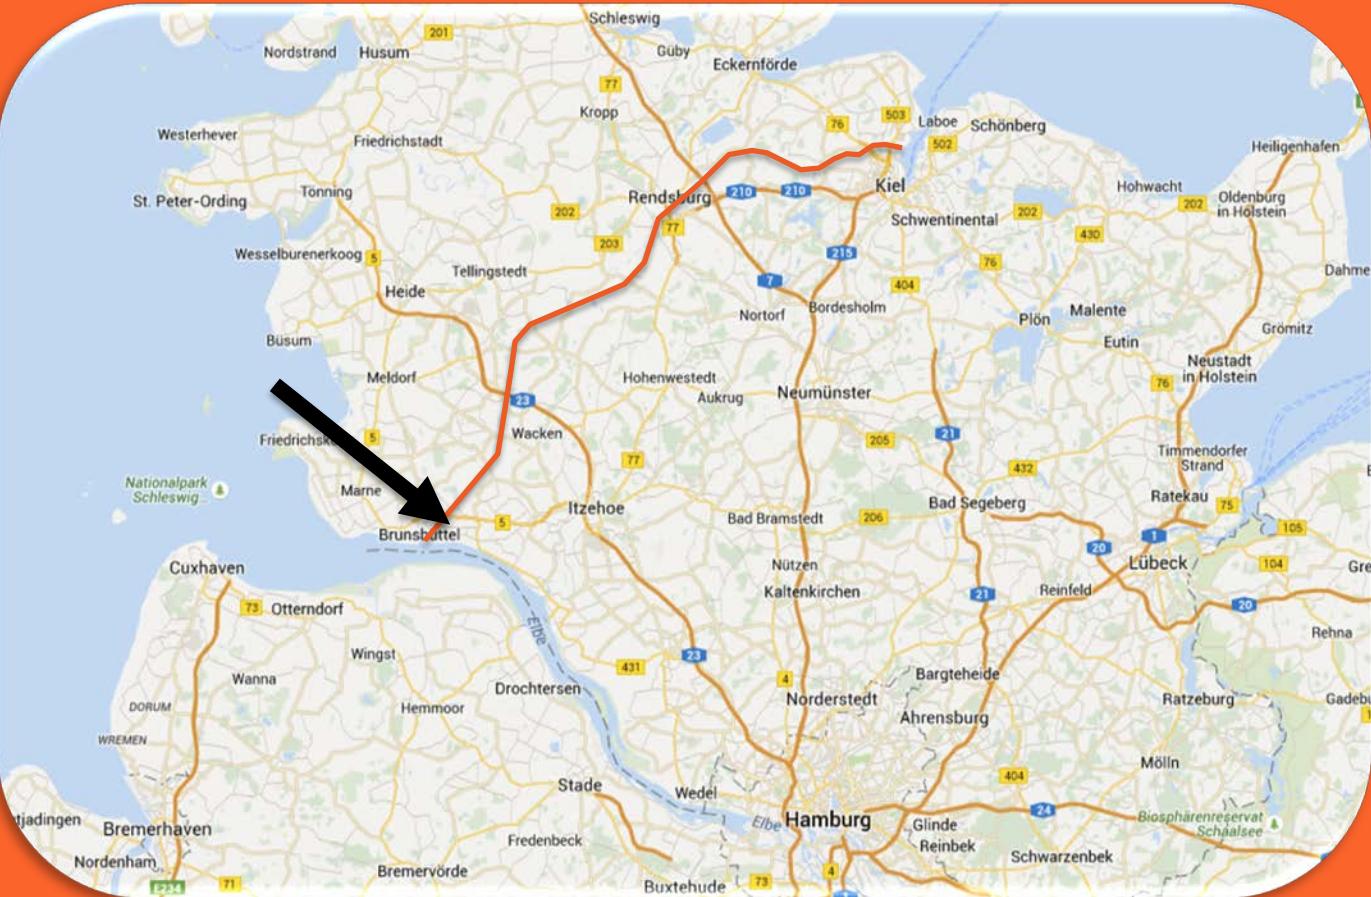

Thomas Sandmann

TOTAL Bitumen Deutschland GmbH  
Industriegebiet Süd  
25541 Brunsbüttel

# Location of TOTAL Bitumen Deutschland (TBD)

## Location of TOTAL Bitumen Deutschland (TBD)

TBD in 1928

TBD today

## Some facts about TBD

**continuous supply via pipelines**  
directly connected to biggest German  
crude oil deposit **Mittelplate**.

crude oil processed to **Distillation**  
**bitumen** used for road construction,  
processed to **polymermodified**  
**Bitumen** or to **Oxidation bitumen**

**Transport** mainly done by road tankers,  
railtank wagons or ship. **Packed**  
**Bitumen** in blocks or in granular form

## Delivery Forms

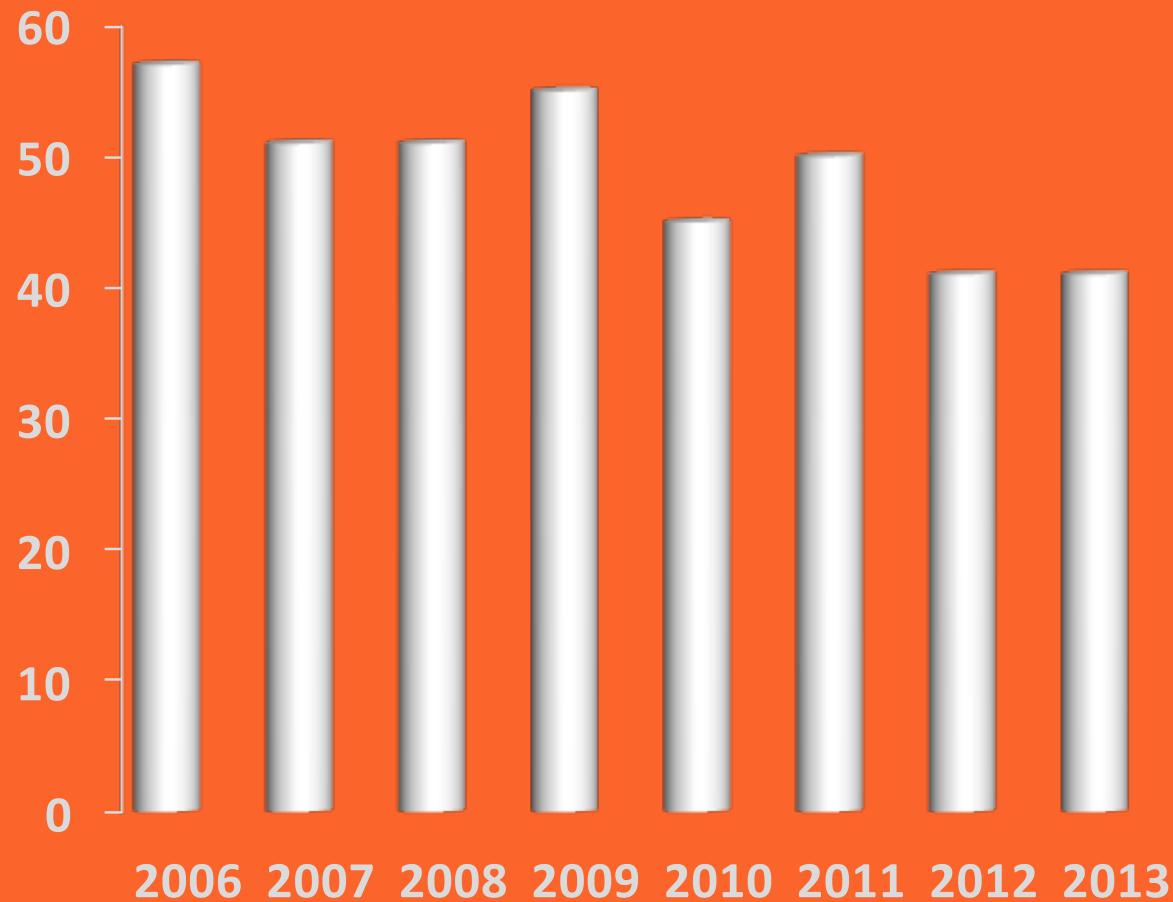

# Bitumen Production

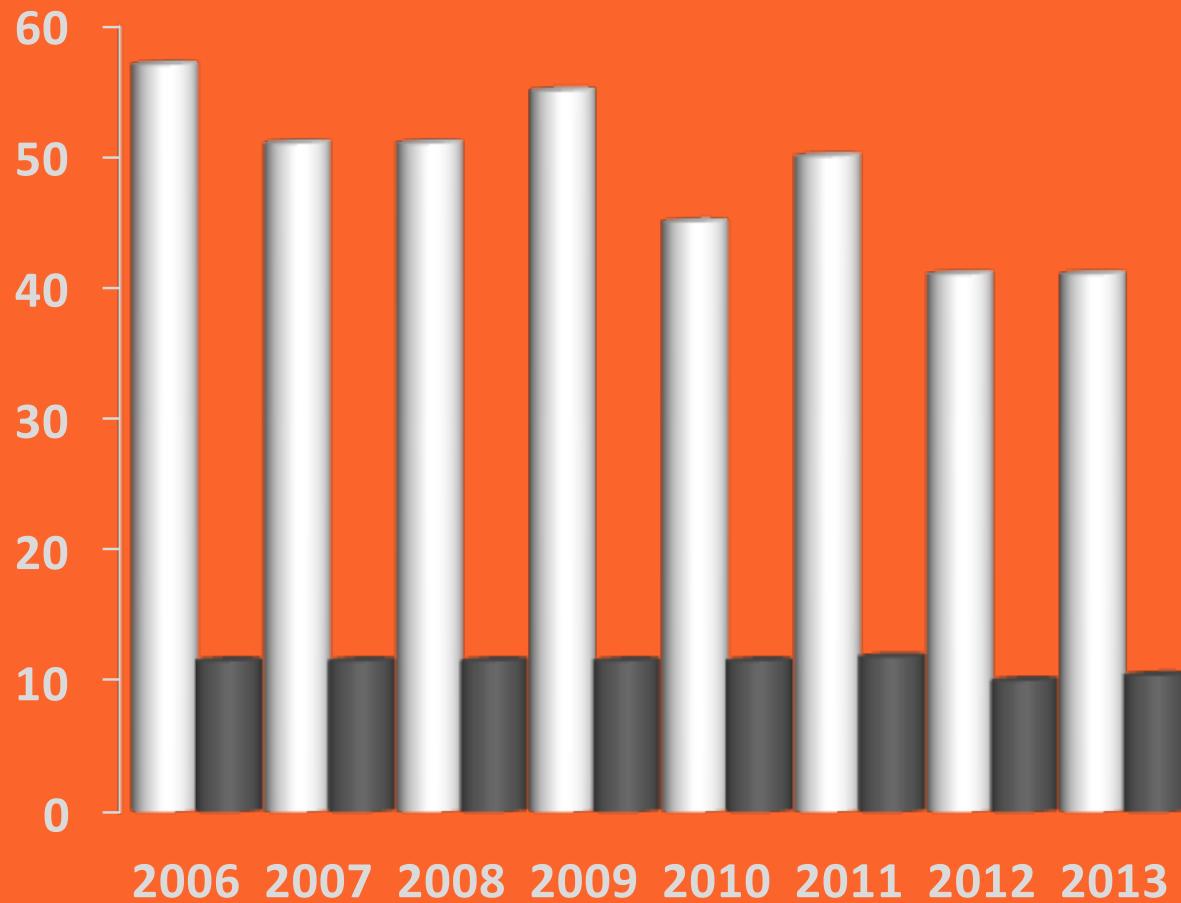

## Asphalt production in Germany [Mio. t]

## Asphalt Production [%]

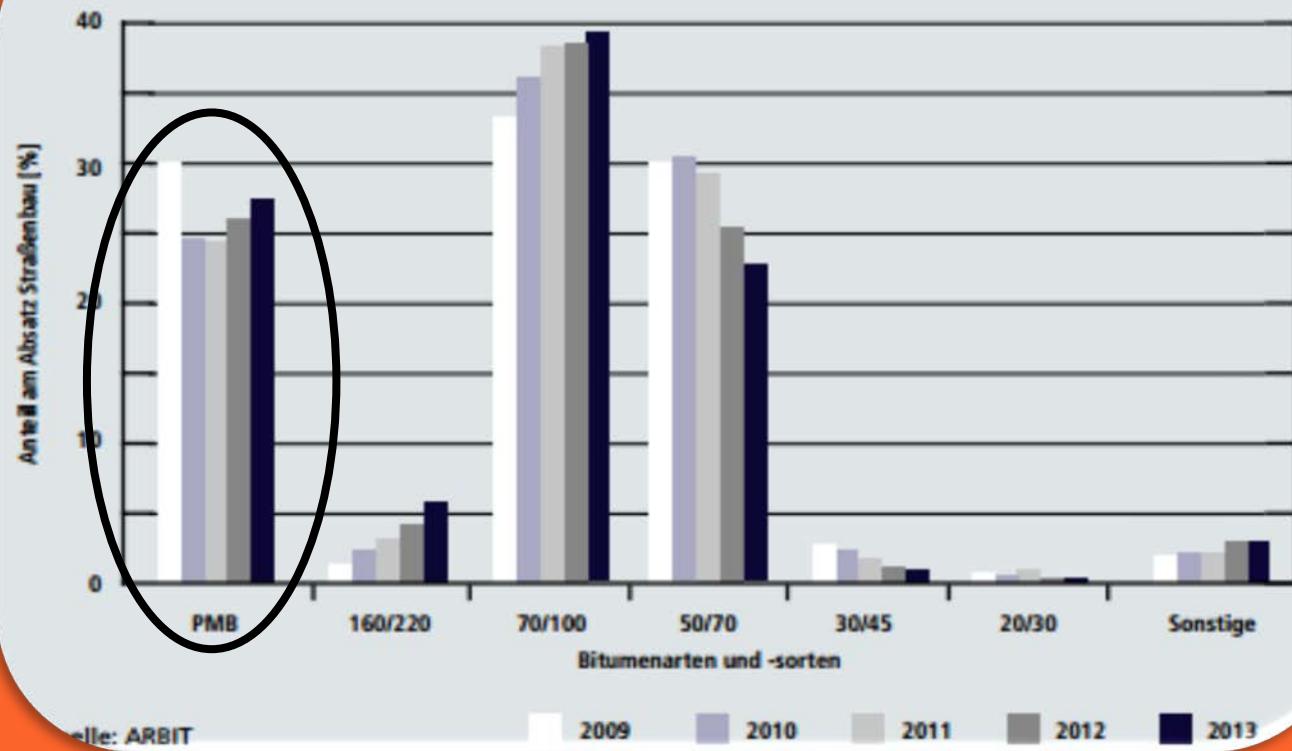

Quelle: EAPA; Asphalt in Figures 2013

# PmB in Road Construction

Quelle: [www.arbit.de](http://www.arbit.de)

## Bitumenabsatz im Straßenbau

# Recycling of Asphalt in Germany

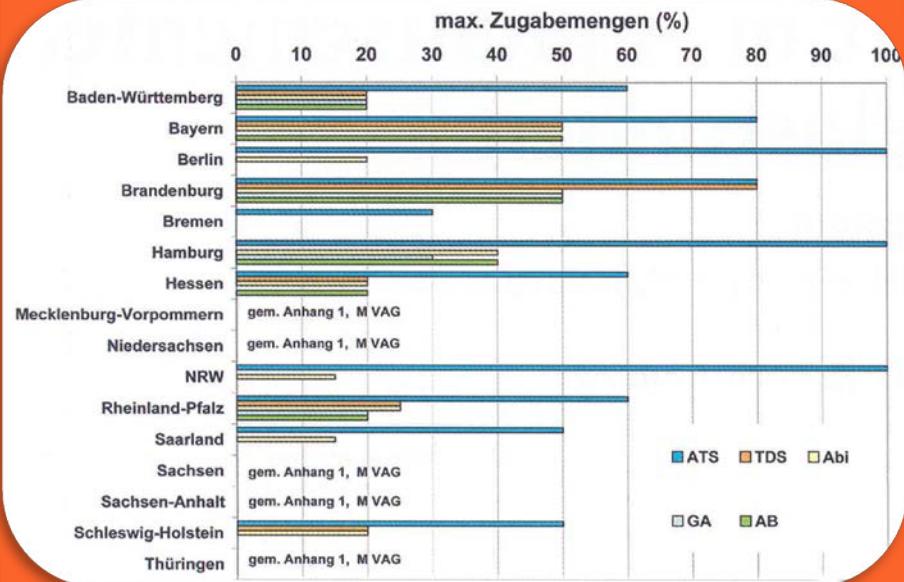

Experience with RA in Germany since more than 30 years

binder courses with PMB with the requirement of an equivalent binder in the complete mixture

since 1996 < **20** % share of RA

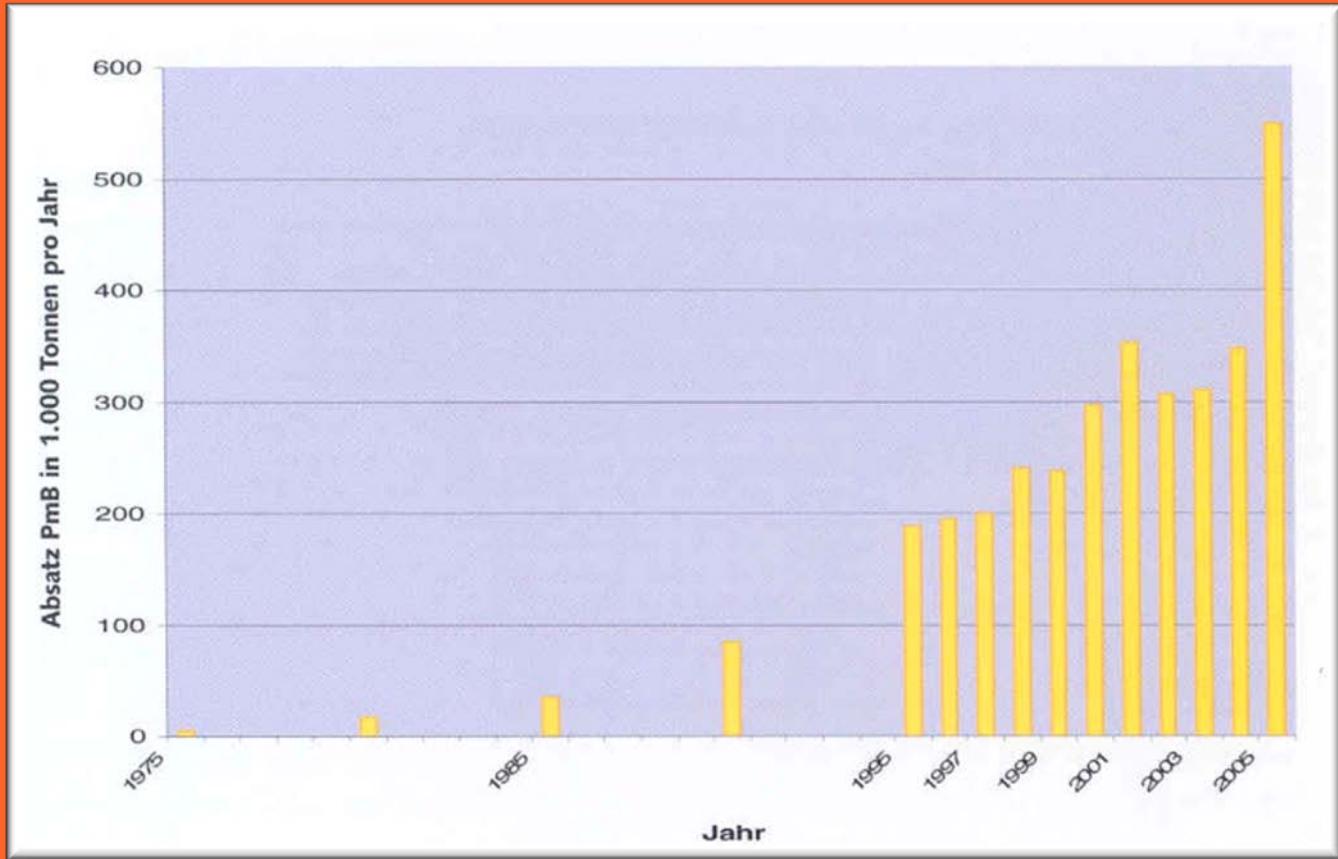

since 2005 < **40** % share of RA

new hotmix production that contains reclaimed material ~ **97** % (in 2012)

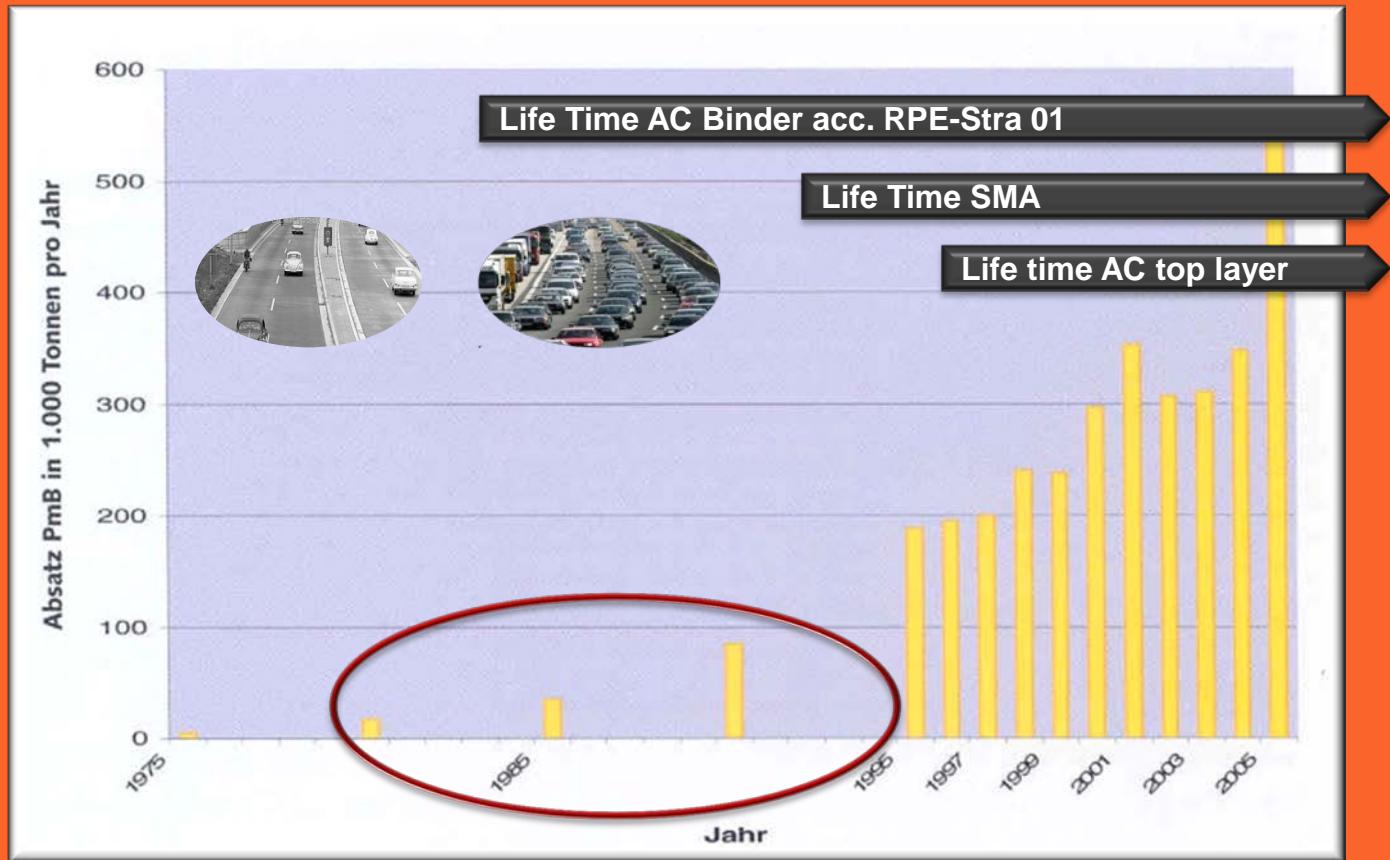

## Need for PmB RC

Quelle: ARBIT; 75 Jahre ARBIT

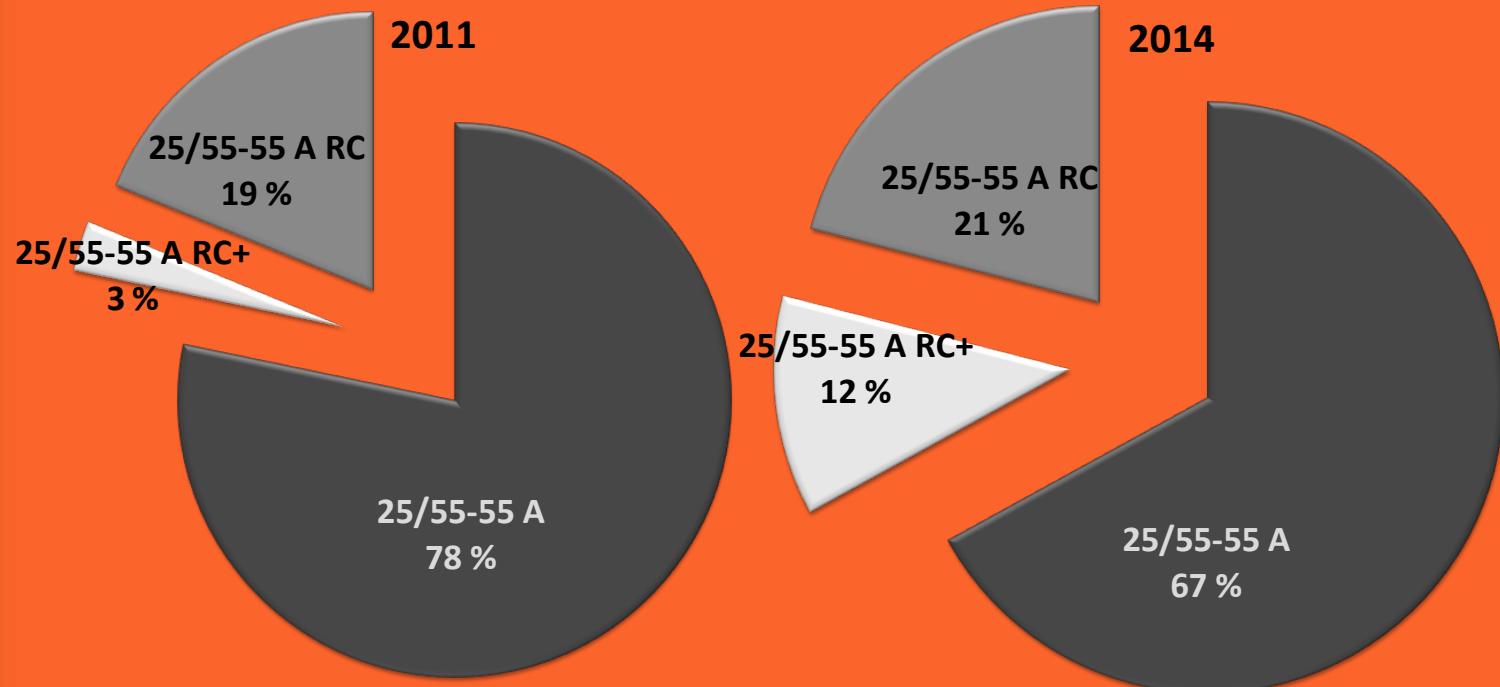

## Need for PmB RC

Quelle: ARBIT; 75 Jahre ARBIT

## Evolution of PmB RC production

# PmB for Recycling

binder in the mixture (product and binder of RA) must fulfill the national specifications for a PMB

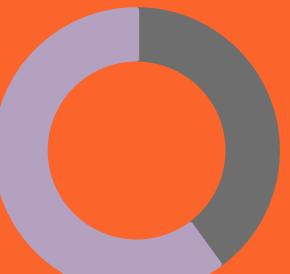

Authorities Demand

Asphalt with  
100 % PMB

product must fulfill the national specifications for a PMB

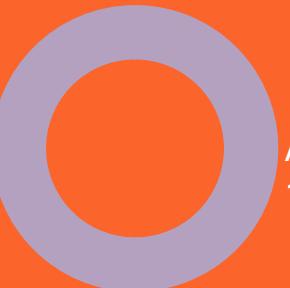

Clients wish

Asphalt with PMB  
and high share of  
RA

binder of RA must have a elastic recovery > 50% (equal to origin binder)

TOTAL  
Result

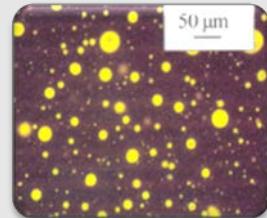

Asphalt with  
100 % STYREL

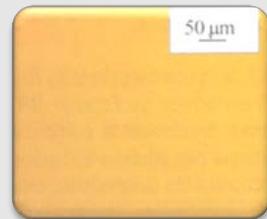

## Production of PmB

### Polymer modification

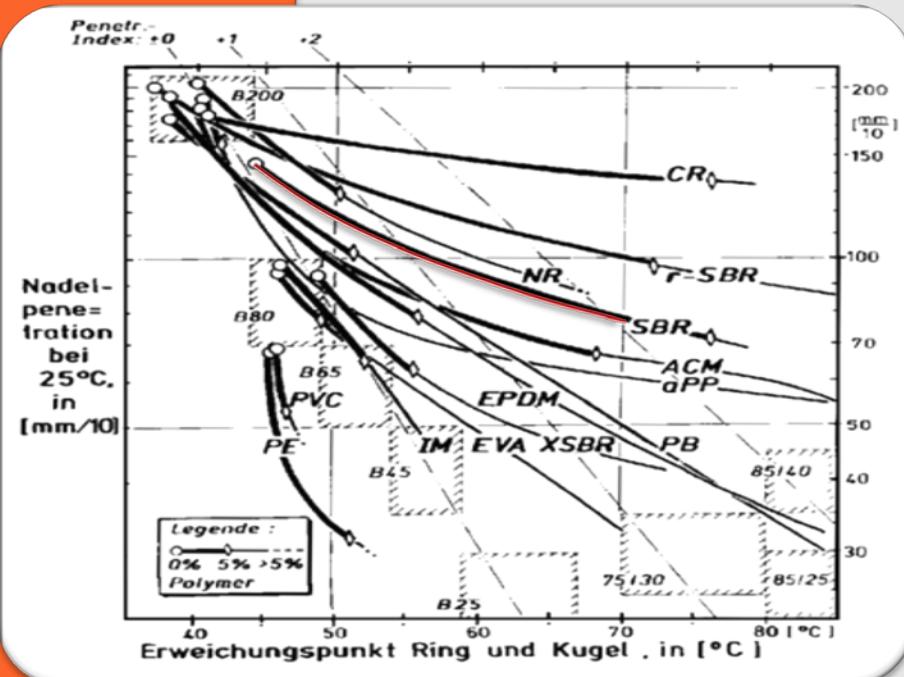

- + spez. Pen Grade Bitumen
- = Styrol-Butadien-Polymer
- = physical mixture of Bitumen and Polymer

- + Cross linking agent
- = chemical cross-linked polymermodified Bitumen

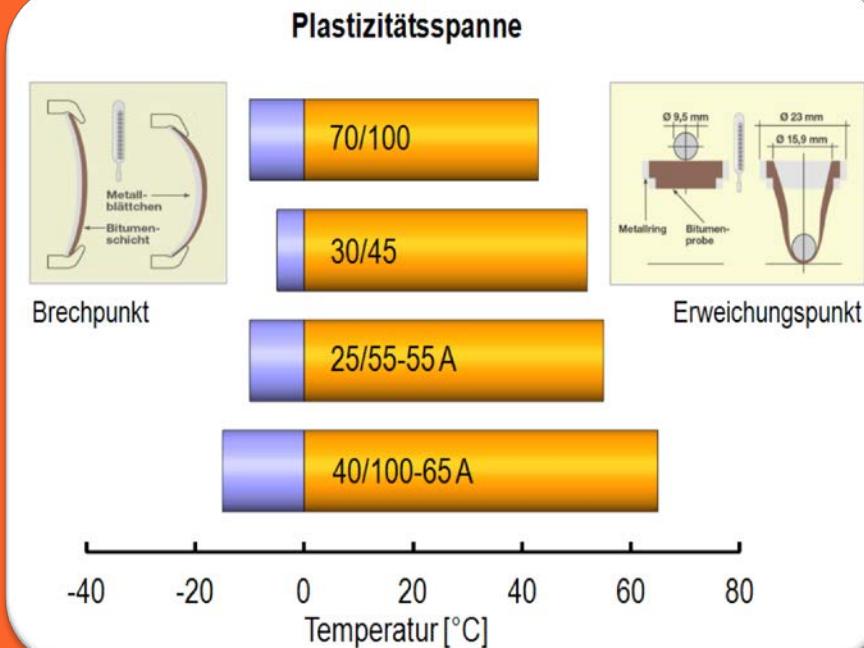

# Polymer content

Quelle: Die Asphaltstrasse 1/85

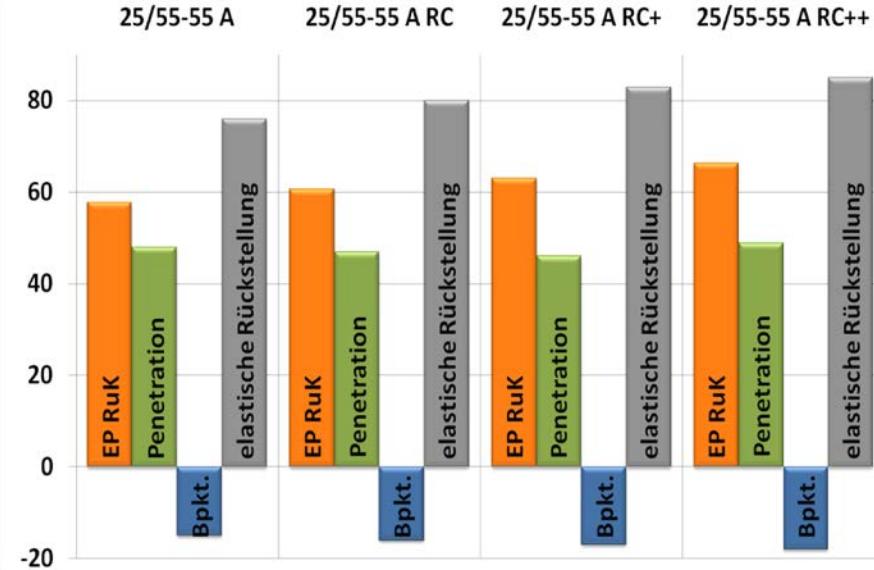

- ! Influence of variable polymers
- ! Excessive polymer content -> phase inversion

## Effects of modification

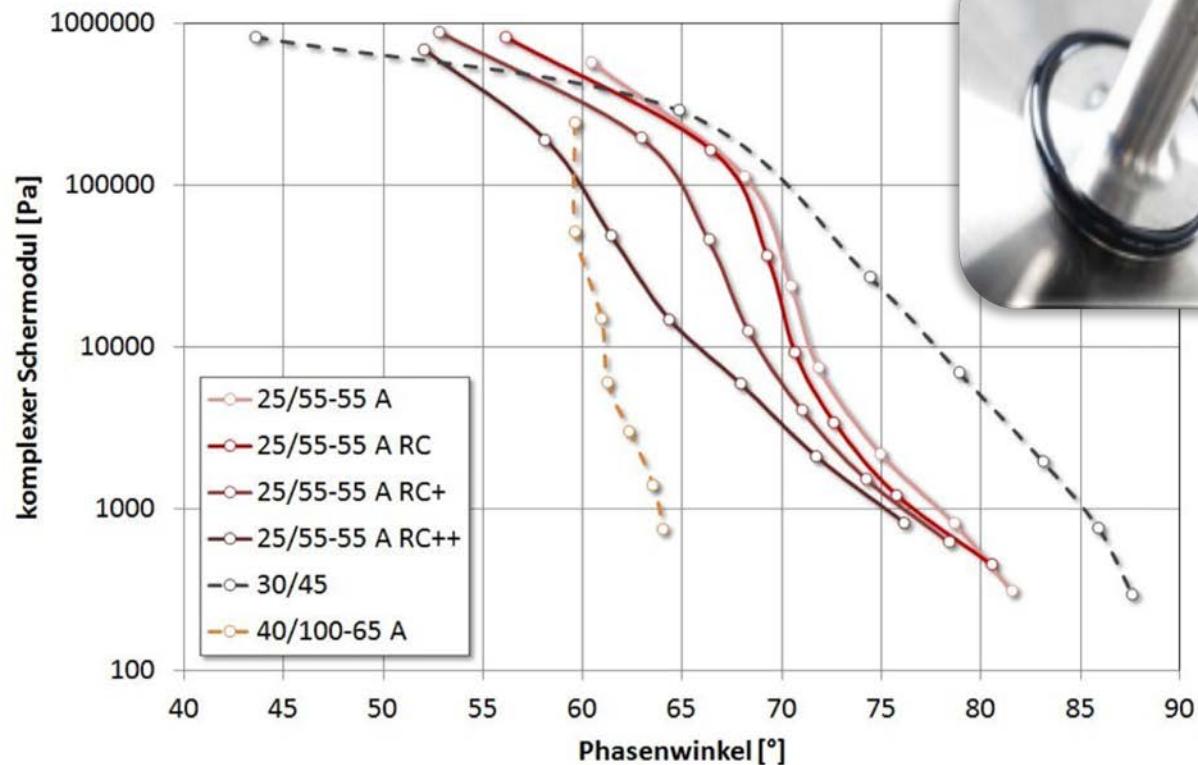

- + extended plasticity range
- + improved elasticity
- + better cohesion

## Effects of modification

- + SP R&B increasing
- o Needle Penetration not changing
- Breaking Point decreasing
- + Elastic Recovery increasing

## BLACK-Diagramm

# Technical Regulation

**TL Bitumen-StB 07**  
**Minimum value for**  
**Softening Point R&B**

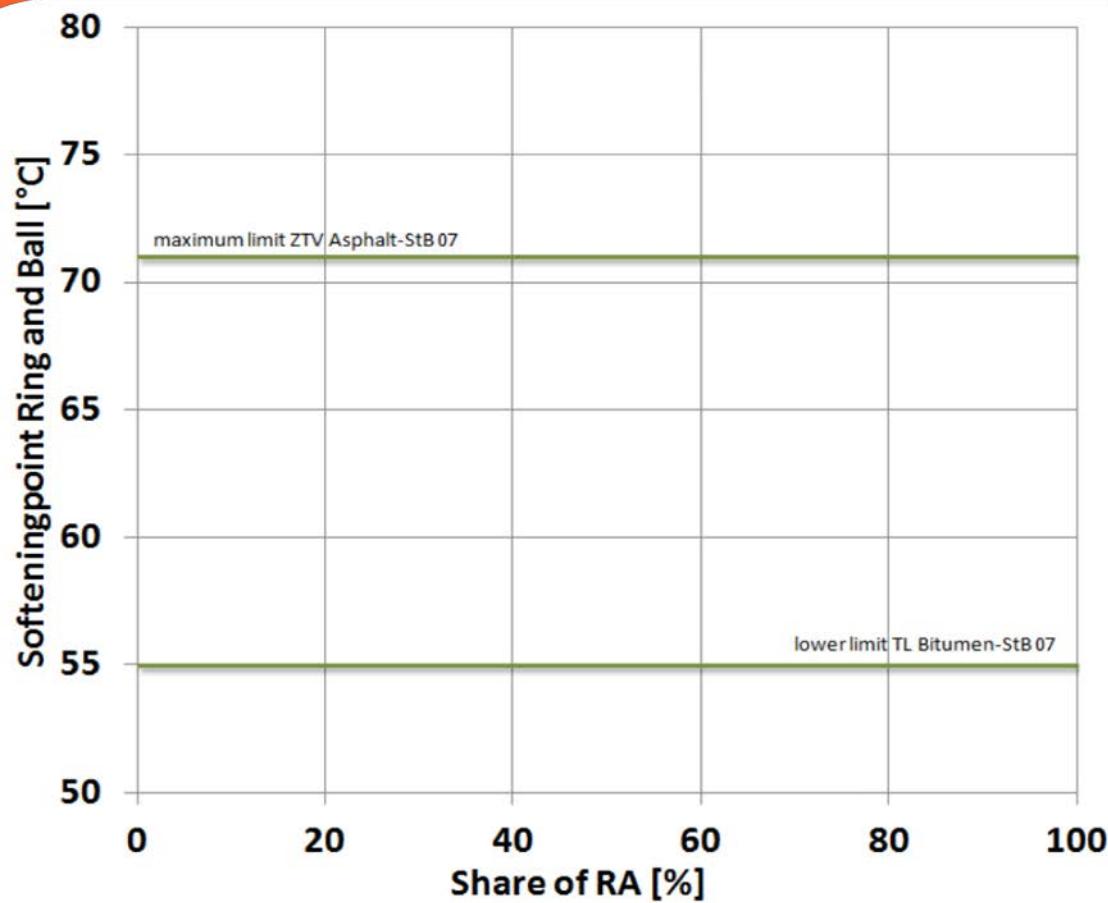

**TL Asphalt-StB 07**  
**Calculation of SP R&B when using**  
**RAP**

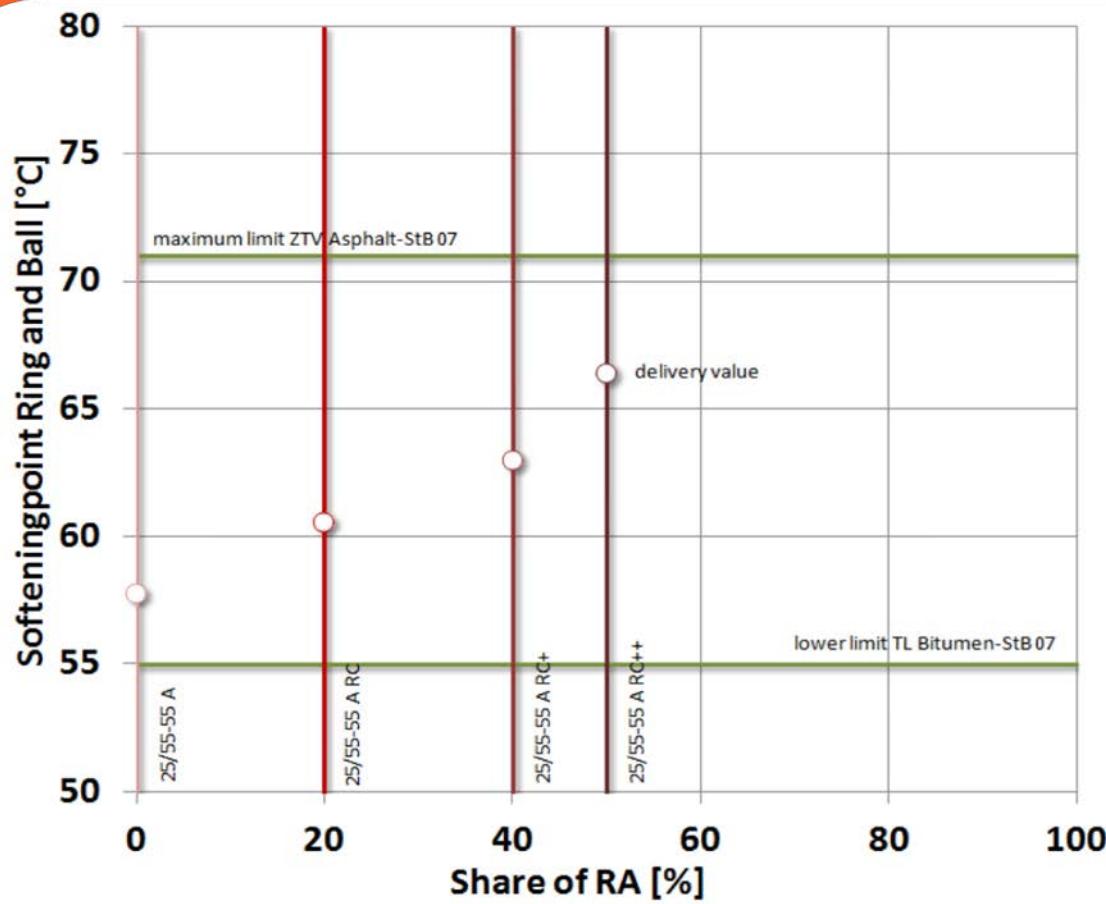

**ZTV Asphalt-StB 07**  
**Requirement for SP R&B and Elastic**  
**Recovery (recovered binder)**

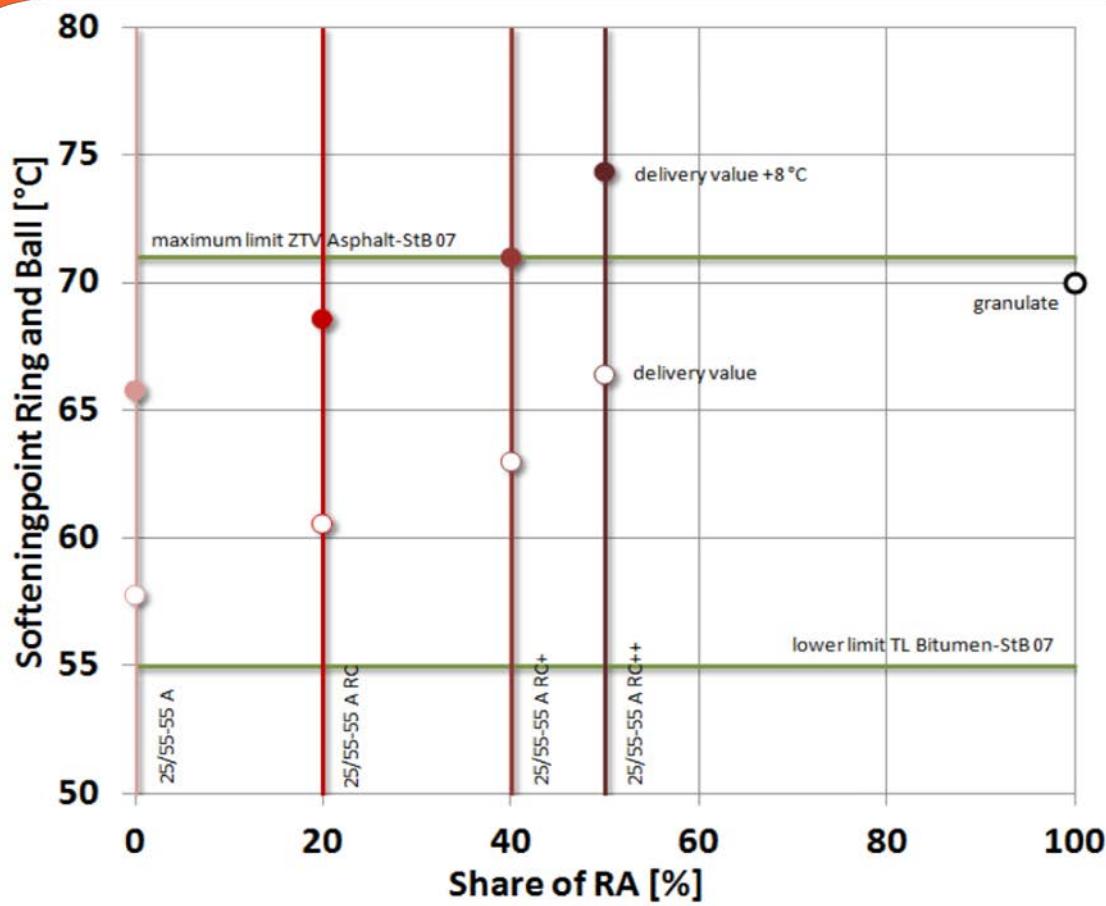

## Consequence of Technical Regulation

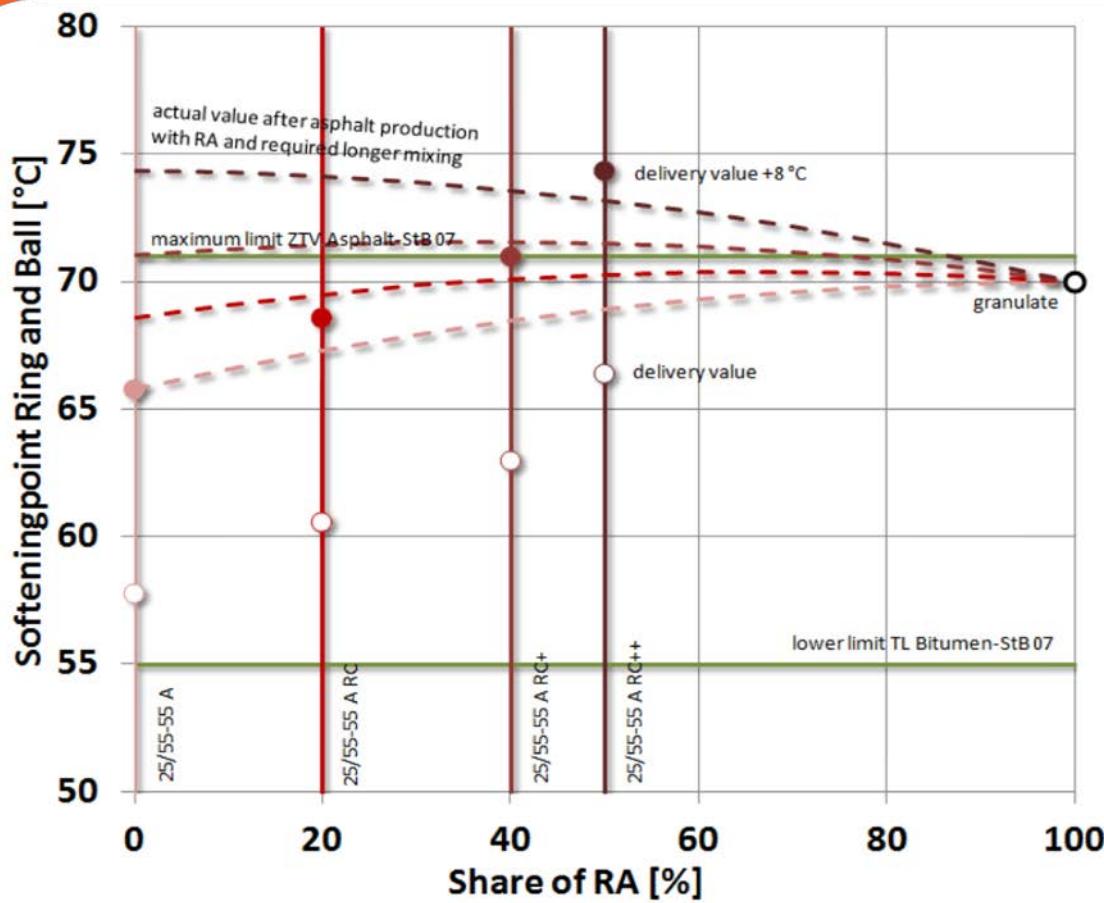

## Consequence of Technical Regulation

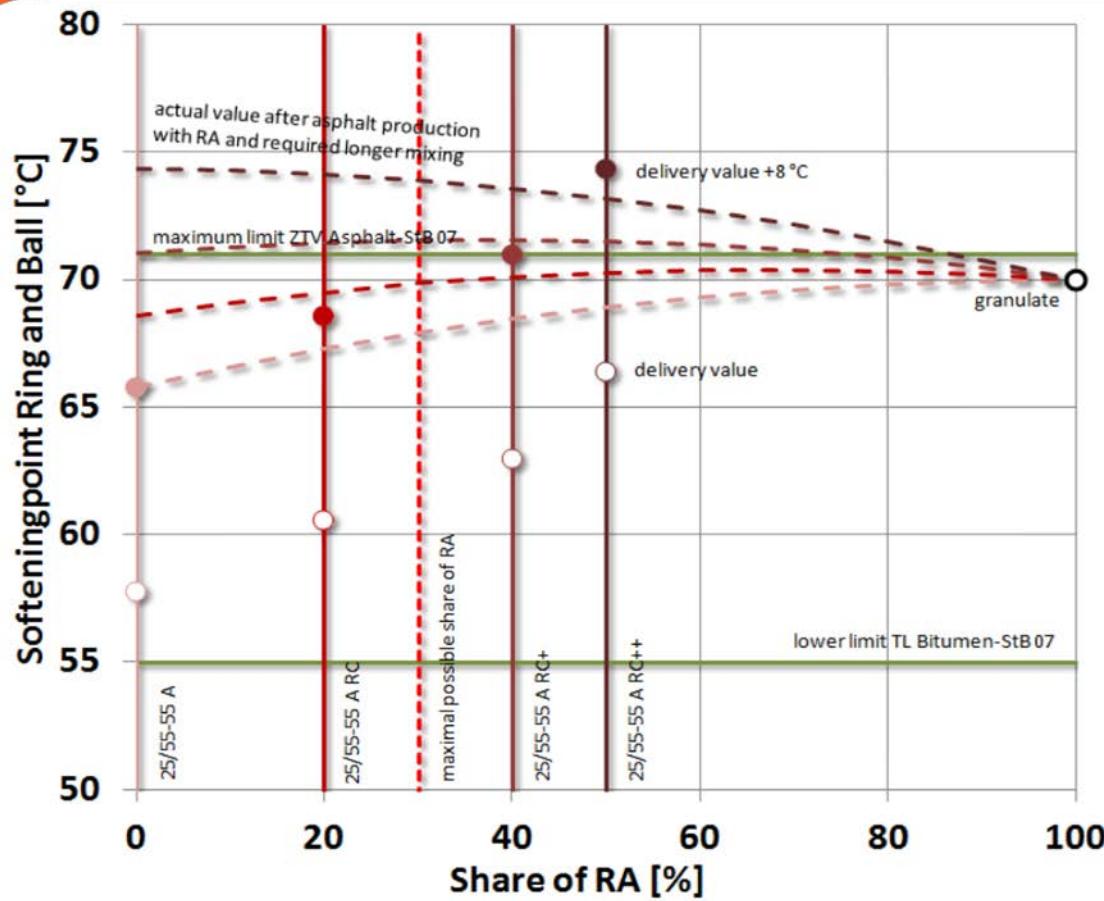

## Consequence of Technical Regulation

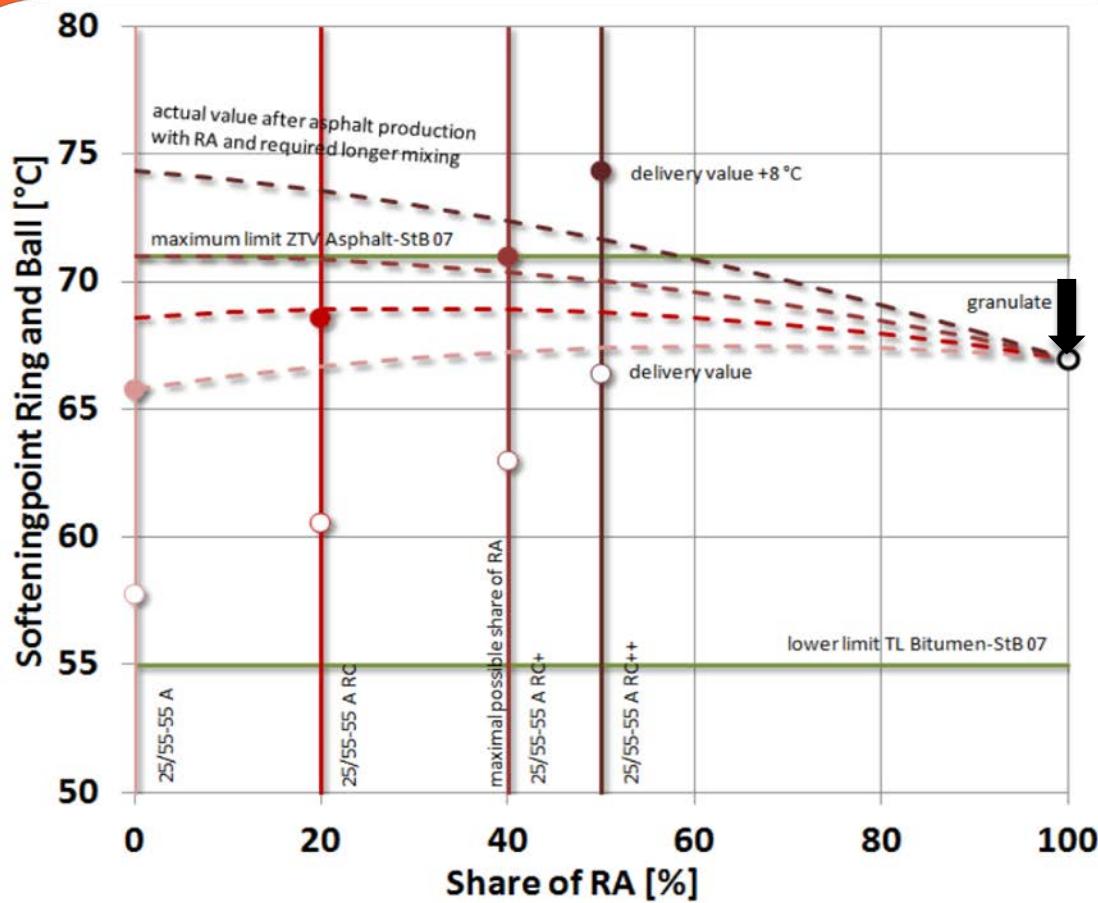

## Consequence of Technical Regulation

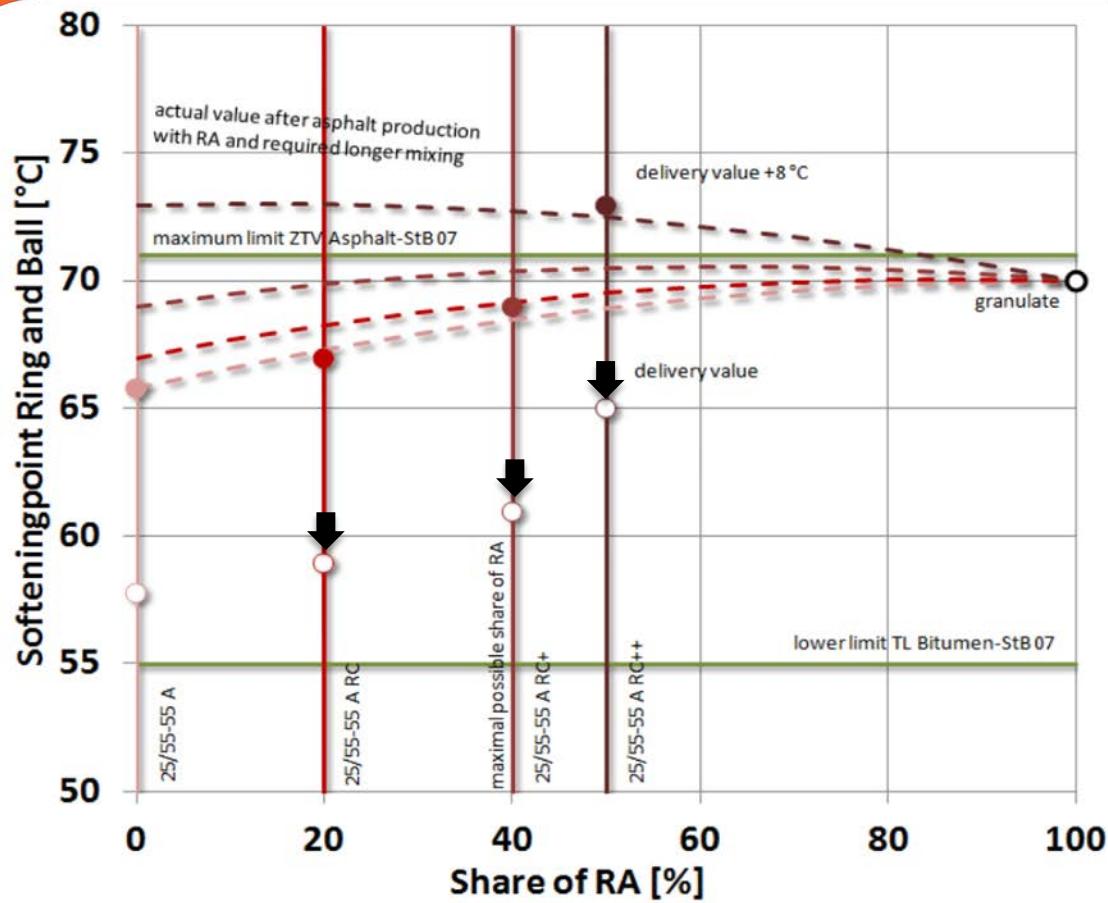

# Consequence of Technical Regulation

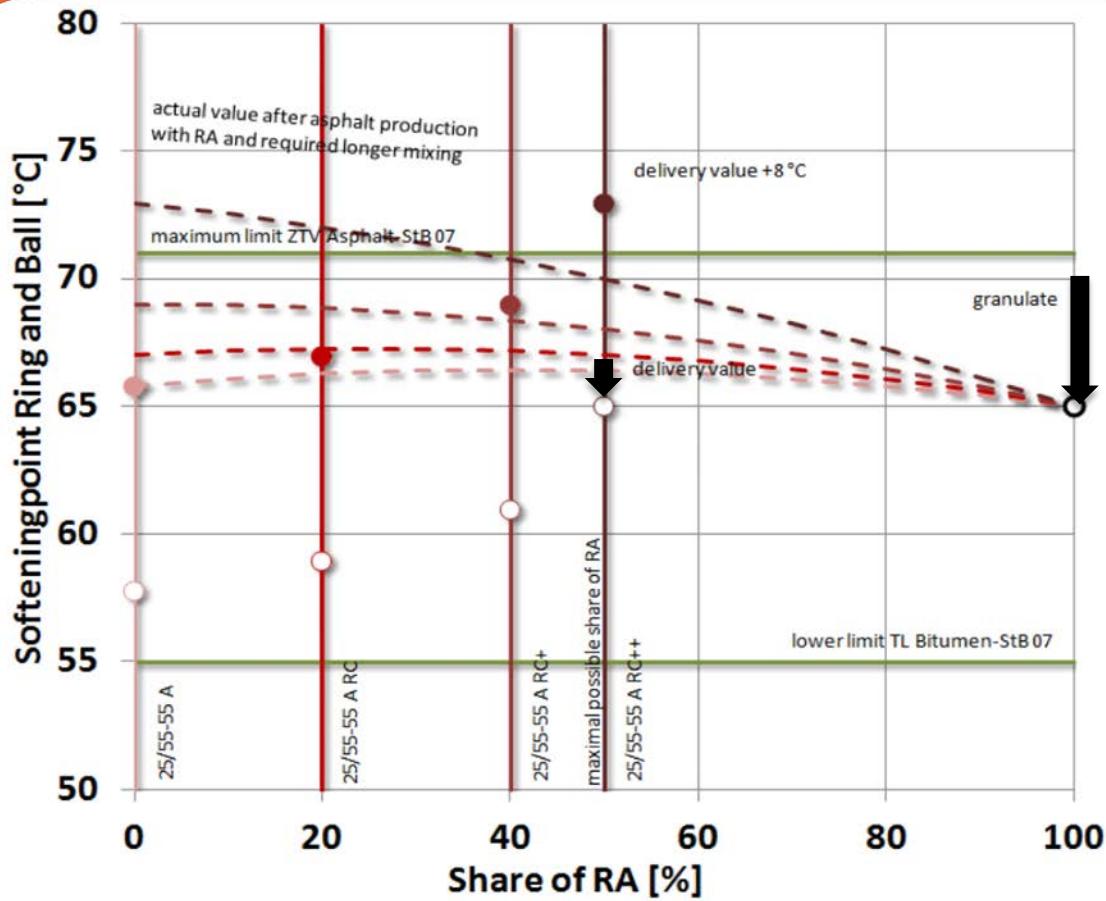

## Decrease of R&B granulate

## Decrease of R&B binder

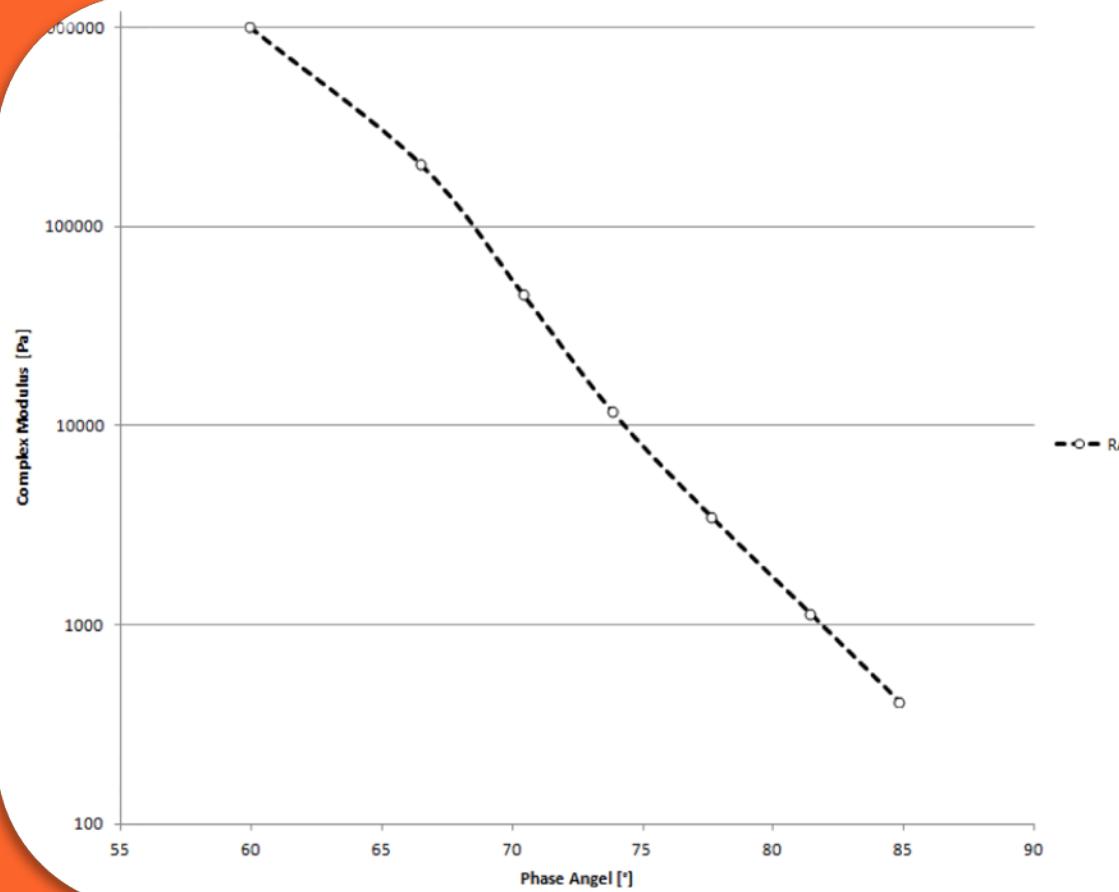

## Decrease of R&B binder & granulate

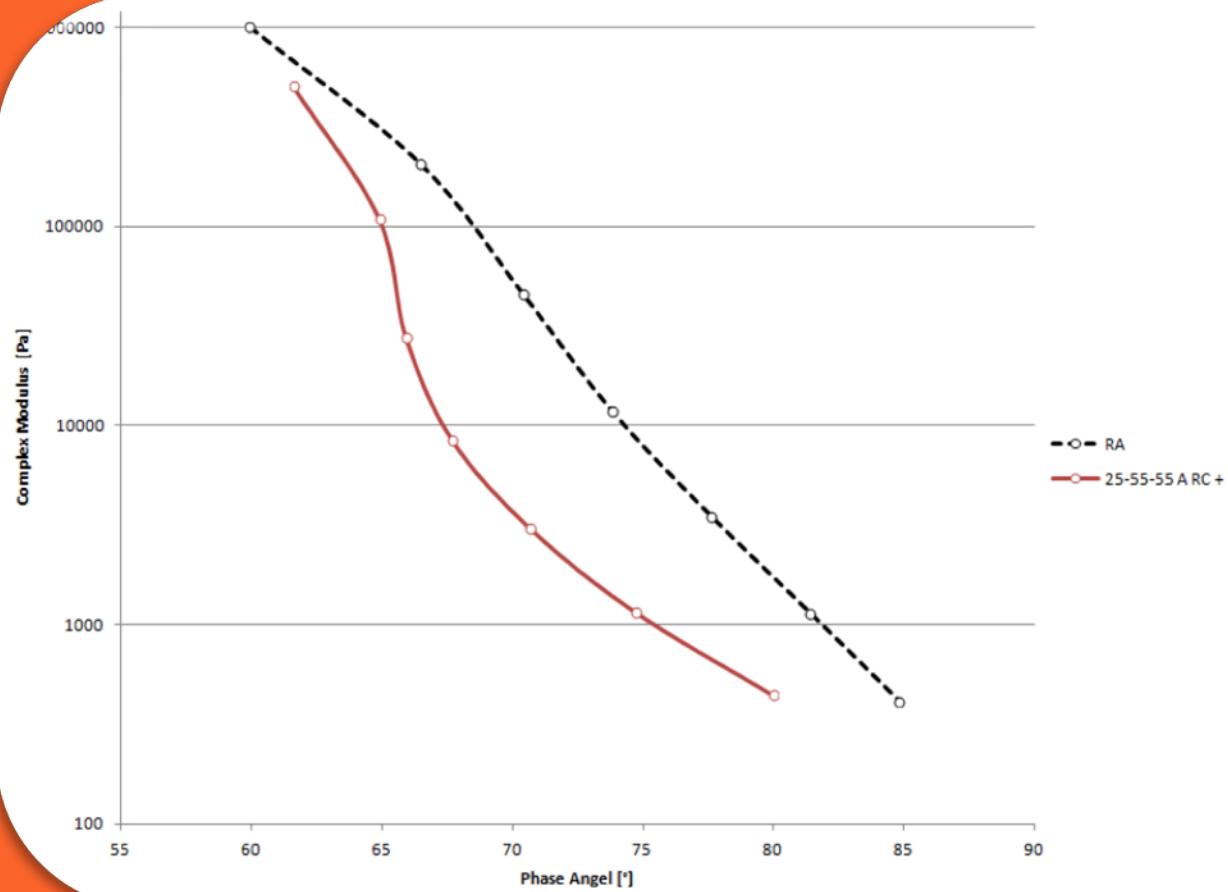

## In Practise

	60 % 40 %	25/55-55 RC+ RA	25/55-55
Penetration @ 25 °C [1/10 mm]		35	25-55
Softening Point R&B [°C]		61,0	> 55
Elastic Recovery [%]		77	> 50
Breaking Point Fraass [°C]		-11	< -10

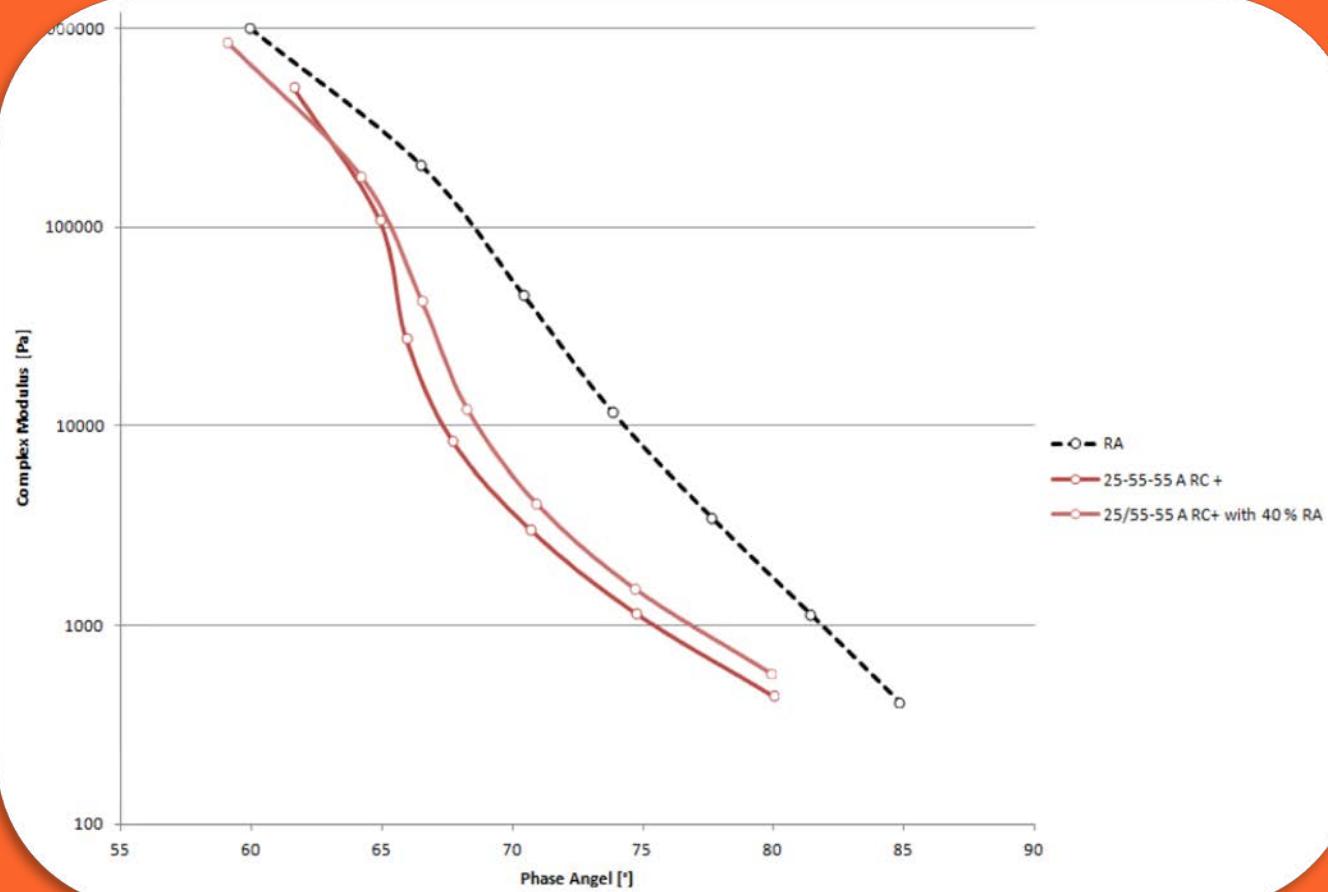

## In Practise

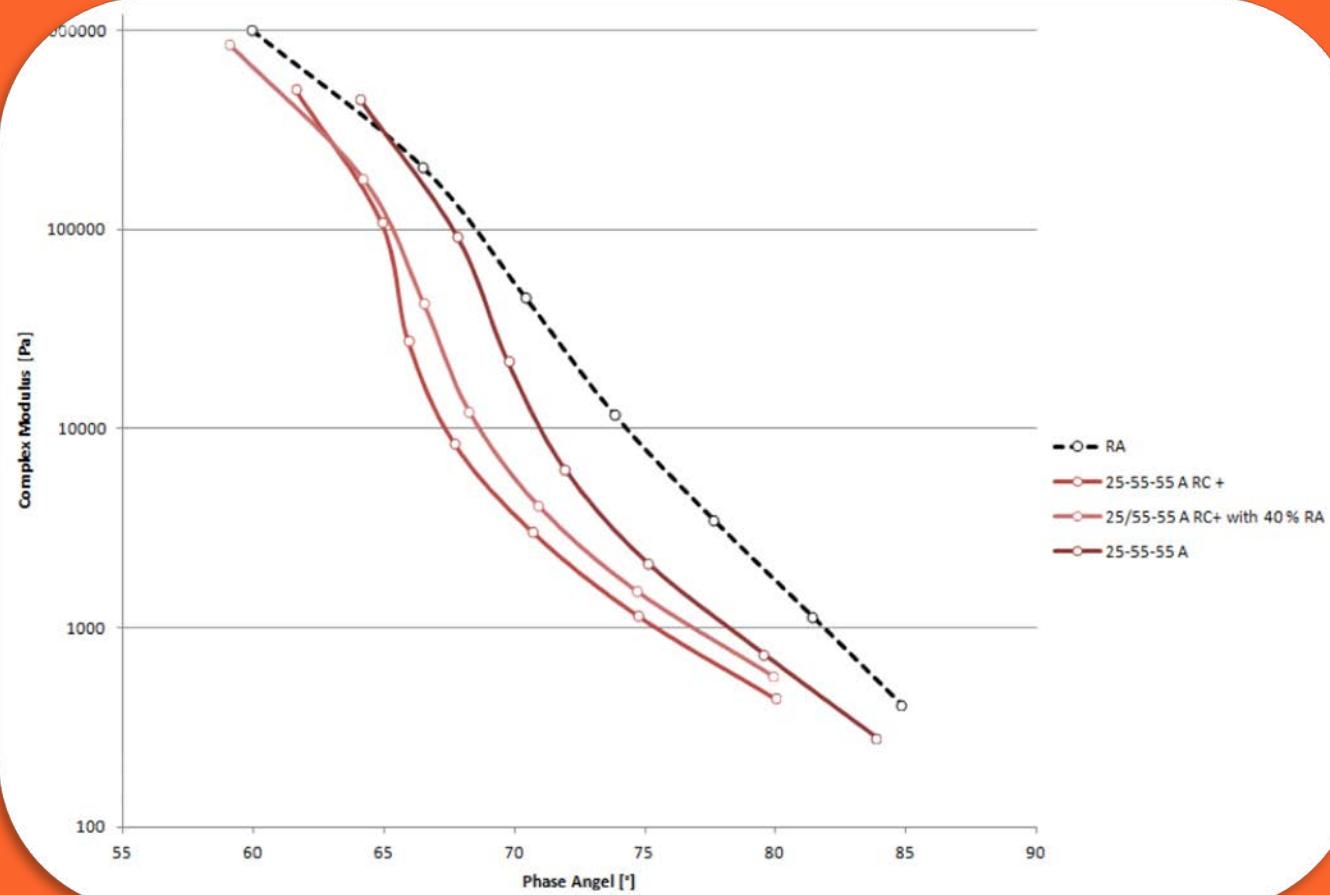

## In Practise

## In Practise

## In Practise

## Open Questions

### Softening Point R&K

- Do we need an upper limit or we lack only an appropriate test method for addressing the low-temperature properties?

### Use of softer binder

- Analog procedure for PmB as for the road bitumen when using asphalt granulate?

## Conclusion

Specially formulated PMB-RC types allow a share of RAP from 40 - 50%

PmB-RC-made asphalts are equivalent to those with exclusively fresh binder
